

cellular response to vascular endothelial growth factor stimulus regulation of bone remodeling ossification regulation of tissue remodeling

positive regulation of programmed cell death

regulation of cytoskeleton organization

positive regulation of apoptotic process

positive regulation of protein kinase activity

	number of genes
positive regulation of myelination response to metal ion myelination positive regulation of cell death cellular zinc ion homeostasis gliogenesis astrocyte differentiation glial cell differentiation	5101520
negative regulation of growth	
negative regulation of cytokine production zinc ion homeostasis axon ensheathment glial cell development	p.adjust 0.04 0.03
positive regulation of gliogenesis	0.02
positive regulation of inflammatory response ensheathment of neurons	0.01

negative regulation of protein modification process response to temperature stimulus

protein refolding

protein folding response to heat chaperone-mediated protein folding
